Just drag the paths that represent the flows, and link the paths to perform process logic. The tool is the perfect way to build a workflow without needing a programmer. YAWL Deployment, Validation, and Debugging Application - The deployment, validation, and debugging tools included in the editor provide insight into the workflows created in the editor. By providing an interactive debugging tool, the application makes sure that the content in your workflow is valid. A hypertext link for the debugger is located in the context menu, so that it is easy to find. The debugging tool is

completely customizable, so that it can be applied to the entire editor or to selected parts of it. The authors give a review of the literature and their own experience of differential diagnostic possibilities in diagnosis of recurrent isolated trigeminal neuralgia and paroxysmal hemicrania. A family of

syndromes with affection of different cranial nerve nuclei was defined. The above syndromes are characterized by the age and sex, relation between pain and sleep, location of pain, types of pain, psychic and vegetative syndromes associated with the pain. These syndromes were differentiated from trigeminal neuralgia. In the proposed classification of trigeminal neuralgia are included attacks without the above criteria.
