AutoCAD supports external services that are offered by AutoCAD Labs. External services are available to be registered and installed for use in AutoCAD. History Autodesk's AutoCAD software was originally developed and marketed as AutoLISP before it was ported to Microsoft's Windows operating system. The company first announced it would release an AutoCAD API in 1987. The initial release of AutoCAD for Windows was made available for the first time on December 15, 1992. On July 24, 1995, at AutoCAD's 10th anniversary show at the Moscone Center in San Francisco, AutoCAD introduced Visual LISP, an alternative to the AutoLISP programming language and Microsoft LISP, which was still the company's primary programming language at the time. Visual LISP enabled AutoCAD developers to automate the operation of a large number of the program's functions with code. At AutoCAD's 11th anniversary in 1997, AutoLISP was replaced by AutoCAD's Visual LISP and a VBA programming language was made available. VBA enabled users to automate the operation of many of AutoCAD's functions using commands that could be placed in Microsoft Office workbooks. With AutoCAD 12, VBA was replaced with the new .NET application programming interface, and the ObjectARX class library, which includes VB and C++ implementations of the .NET standard, and continues to support AutoCAD's Visual LISP and VBA programming languages. With AutoCAD 2010, .NET development was replaced with Microsoft Visual Studio.NET and object-oriented programming was replaced with Microsoft Visual Basic and C++. ObjectARX was also rewritten in C++ as Autodesk Exchange Apps and the C++ classes

were integrated into the Autodesk Exchange SDK. These changes allowed existing .NET plugins to be ported back to the older ObjectARX-based .NET plugins. AutoCAD 2014 was the first AutoCAD release to use DXF, a new drawing exchange format. AutoCAD 2016 was ca3bfb1094
